

Get your app in front of billions of users.

Launching apps in the Microsoft Office 365 store enables you to reach a global market while optimizing the overall value of your apps. Work with 3Sharp, the leaders in developing apps for Office and successfully deploying them in the Office 365 store, to take your SaaS offering and put it in the hands of billions of Microsoft Office users.

Why work with 3Sharp?

- Proven track record for success with enterprise customers
- 14+ years of experience building apps from conception to publication
- Experience working with modern app structure two years before its inception
- A complete team of developers, QA, and project managers
- Seamless integration with your team and processes

Maintain and support code on your own

Our holistic handoff includes:

- Architectural and code walk-throughs
- Well-documented code base
- Commented source code for easy consumption
- Flexible hosting options with a new or existing Azure subscription, custom deployment packages or via our own managed Azure subscription

Our experience gives you an advantage, as we can accurately create and deploy your apps while also proactively predicting and preparing for any challenges that may arise.

Let us do the heavy lifting
to get your app into the Office Store.

App integration projects can take as little as **6 weeks to complete** and have the following structure:

How we get it done

1 Questionnaire

3Sharp will send you an initial questionnaire to gain an understanding of your product, your available API functionality, security options, UI Design guidance, links to your privacy policy, and other aspects of your offering.

2 Needs Analysis

Our project managers, developers, and quality assurance teams will meet with you to pinpoint your requirements and develop an actionable plan to effectively get your app live in the Office Store.

3 Scope Meeting

Based on our prior discussions and the questionnaire, 3Sharp's team will present an app vision. This will include a deployment strategy, some approaches to security integration, a hosting strategy, UI/UX design approaches, and a review of your design guides, all while working with your designers.

We will write the code that integrates between your published API and Office 365, Office Client, or SharePoint. Because we are highly experienced with these types of projects, we will identify and address any conflicts that may arise.

4 Development

Because our development cycle is only a matter of weeks, we require close integration with your team, including access to developers who can give us API guidance, a product owner who can attend our 15 minute daily standup meetings, and as many stakeholders as you prefer, who can attend our weekly demos.

5 Microsoft Review

Once complete, 3Sharp will work with you to shepherd the app through the Microsoft review process and will address any issues discovered.

6 App Publishing

Once ready, 3Sharp will submit your app to the Office Store.

7 Hosting, Support and Maintenance

Optionally, 3Sharp will host and maintain the application for you in our Azure instance while providing support and maintenance as necessary.
